Figure 2. Interrelation Model of the Ecosystem Service Concept

Source: Authors' own elaboration

Figure 2 illustrates the Interrelation Model of the Ecosystem Service Concept. It shows the relationships between different components of the ecosystem service concept, including the core principle, key categories, and the treatment of supporting processes. The model is based on the authors' own elaboration.

Table 1

Major systems of ecosystem services classification		
Criterion	MEAs / Millennium Ecosystem Assessment (MEA)	CICES / Classification of Ecosystem Services (CICES)
Core Principle	Anthropocentrism: benefits for humans.	for accounting and valuation; avoids double counting.
Key Categories	1. Provisioning 2. Regulating 3. Cultural 4. Supporting	Hierarchical system: Sections > Groups > Classes. Focus on final
Treatment of 'Supporting' Processes	Identified as a separate service category.	/ Excluded as a separate category; considered as underlying functions.
Advantages	Simplicity, clarity, historical significance.	Methodological rigor, suitability for accounting purposes.
Critique	Risk of double counting (supporting services).	Complexity, excessive formalization.

The table compares the Major systems of ecosystem services classification, specifically the Millennium Ecosystem Assessment (MEA) and the Classification of Ecosystem Services (CICES). It evaluates them based on various criteria, including their core principles, key categories, treatment of supporting processes, advantages, and critiques. The MEA is characterized by anthropocentrism and a focus on benefits for humans, while CICES is a hierarchical system focusing on final products. The MEA includes four key categories: Provisioning, Regulating, Cultural, and Supporting. CICES, on the other hand, excludes supporting processes as a separate category, considering them as underlying functions. The MEA's advantages include simplicity, clarity, and historical significance, but it is criticized for the risk of double counting supporting services. CICES is praised for its methodological rigor and suitability for accounting purposes, but it is also criticized for its complexity and excessive formalization.
